Special Issue: Greenhouse Gases in Animal Agriculture – Finding a Balance between Food and Emissions

Preface
Greenhouse gases in animal agriculture—Finding a balance between food production and emissions
T.A. McAllister, K.A. Beauchemin, S.M. McGinn, X. Hao and P.H. Robinson ................................................................. 1

Contribution of Livestock to Greenhouse Gases - A Global Perspective
The significance of livestock as a contributor to global greenhouse gas emissions today and in the near future
F.P. O’Mara ........................................................................................................................................................................ 7

Greenhouse gas emission profiles of European livestock sectors
J.P. Lesschen, M. van den Berg, H.J. Westhoek, H.P. Witzke and O. Oenema ................................................................. 16

A review of whole farm systems models of greenhouse gas emissions from beef and dairy cattle production systems

Benchmarking of greenhouse gas emissions of bovine milk production systems for 38 countries
M. Hagemann, T. Hemme, A. Ndambi, O. Alqaisi and Mst. N. Sultana ................................................................. 46

Comparison of methane production between C3 and C4 grasses and legumes
H. Archimède, M. Eugène, C. Marie Magdeleine, M. Boval, C. Martin, D.P. Morgavi, P. Lecomte and M. Doreau ................................................................. 59

Microbial Ecology of Methanogenesis
Exploring rumen methanogen genomes to identify targets for methane mitigation strategies

Molecular identification of rumen methanogens: Technologies, advances and prospects
M. Zhou, T.A. McAllister and L.L. Guan .......................................................................................................................... 76

Analysis of archaeal ether lipids in bovine faeces

Inhibition of rumen methanogenesis by tea saponins with reference to fermentation pattern and microbial communities in Hu sheep

Chloroform decreases rumen methanogenesis and methanogen populations without altering rumen function in cattle

Effect of fibre- and starch-rich finishing diets on methanogenic Archaea diversity and activity in the rumen of feedlot bulls
M. Popova, C. Martin, M. Eugène, M.M. Mialon, M. Doreau and D.P. Morgavi ................................................................. 113

Evaluation of rumen methanogen diversity in cattle fed diets containing dry corn distillers grains and condensed tannins using PCR-DGGE
and qRT-PCR analyses
R. Mohammed, M. Zhou, K.A. Beauchemin and L.L. Guan ............................................................................................... 122

Isolation and characterization of novel sulphate-reducing Fasobacterium sp. and their effects on in vitro methane emission and digestion
of wheat straw by rumen fluid from Indian riverine buffaloes
S.S. Paul, S.M. Deb and D. Singh ...................................................................................................................................... 132

Approaches to Measuring Greenhouse Gases From Livestock
Towards a standard non-steady-state chamber methodology for measuring soil N₂O emissions
P. Rochette ........................................................................................................................................................................ 141

Losses of N₂O, CH₄ and NH₃ from a grass sward used for overwintering beef heifers
E. Salomon and L. Rodhe ............................................................................................................................................. 147

Use of blanks to determine in vitro net gas and methane production when using rumen fermentation modifiers
R.C. Araujo, A.V. Pires, G.B. Mourão, A.L. Abdalla and S.M.A. Sallam ................................................................. 155
Evaluating effects of tannins on extent and rate of
in vitro rumen methane production from feedstuffs
A. Navarro-Villa, M. O’Brien, S. López, T.M. Boland and P. O’Kiely 163

In vitro rumen methane output of perennial ryegrass samples prepared by freeze drying or thermal drying (40 °C)
P.J. Purcell, M. O’Brien, T.M. Boland and P. O’Kiely 175

Enteric methane emission rates determined by the SF₆ tracer technique: Temporal patterns and averaging periods

Post-experiment correction for release rate in permeation tubes improves the accuracy of the sulphur hexafluoride (SF₆) tracer technique in deer
N.M. Swainson, I.M. Brookes, S.O. Hoskin and H. Clark 192

A simple method for pre-calibration storage of sulphur hexafluoride permeation tubes
M.H. Deighton, B.M. O’Loughlin, F. Buckley and T.M. Boland 198

Assessment of the sulphur hexafluoride (SF₆) tracer technique using respiration chambers for estimation of methane emissions from sheep

Repeatability of methane emissions from sheep
C.S. Pinares-Patiño, J.C. McEwan, K.G. Dodds, E.A. Cárdenas, R.S. Hegarty, J.P. Koolaard and H. Clark 210

Validation of a short-term methane measurement using portable static chambers to estimate daily methane production in sheep

Micrometeorological techniques for measurement of enteric greenhouse gas emissions
L.A. Harper, O.T. Denmead and T.K. Flesch 227

Comparison of open-circuit respiration chambers with a micrometeorological method for determining methane emissions from beef cattle grazing a tropical pasture
N.W. Tomkins, S.M. McGinn, D.A. Turner and E. Charmley 240

Finding Approaches to Mitigating Methane Without Compromising Production

Does the complexity of the rumen microbial ecology preclude methane mitigation?
A.-D.G. Wright and A.V. Klieve 248

Influence of cold-pressed canola, brewers grains and hominy meal as dietary supplements suitable for reducing enteric methane emissions from lactating dairy cows
P.J. Moate, S.R.O. Williams, C. Grainger, M.C. Hannah, E.N. Ponnampalam and R.J. Eckard 254

Effects of replacing barley grain in feedlot diets with increasing levels of glycerol on in vitro fermentation and methane production
J.S. Avila, A.V. Chaves, M. Hernandez-Calva, K.A. Beauchemin, S.M. McGinn, Y. Yang, O.M. Harstad and T.A. McAllister 265

Glycerol as a feed supplement for ruminants: In vitro fermentation characteristics and methane production

Effects of oral nitroethane administration on enteric methane emissions and ruminal fermentation in cattle

A meta-analysis of malate effects on methanogenesis in ruminal batch cultures
E.M. Ungerfeld and R.J. Forster 282

Lowering ruminant methane emissions through improved feed conversion efficiency
G.C. Waghorn and R.S. Hegarty 291

Methane emissions from grazing Angus beef cows selected for divergent residual feed intake
F.M. Jones, F.A. Phillips, T. Naylor and N.B. Mercer 302

Can enteric methane emissions from ruminants be lowered without lowering their production?
C. Grainger and K.A. Beauchemin 308

Linseed suppresses enteric methane emissions from cattle fed barley silage, but not from those fed grass hay
Y.-H. Chung, M.L. He, S.M. McGinn, T.A. McAllister and K.A. Beauchemin 321

Dietary linseed and starch supplementation decreases methane production of fattening bulls

Essential oils and opportunities to mitigate enteric methane emissions from ruminants
C. Benchaar and H. Greathead 338

Garlic oil and its principal component diallyl disulfide fail to mitigate methane, but improve digestibility in sheep
F. Klevenhusen, J.O. Zeitz, S. Duval, M. Kreuzer and C.R. Soliva 356

Effects of forage legumes containing condensed tannins on methane and ammonia production in continuous cultures of mixed ruminal microorganisms
C.M. Williams, J.-S. Eun, J.W. MacAdam, A.J. Young, V. Fellner and B.R. Min 364

Effects of Leucaena condensed tannins of differing molecular weights on in vitro CH₄ production
X.D. Huang, J.B. Liang, H.Y. Tan, R. Yahya and Y.W. Ho 373

Evaluating effects of tannins on extent and rate of in vitro gas and CH₄ production using an automated pressure evaluation system (APES)

Effects of forage chicory (Cichorium intybus) and perennial ryegrass (Lolium perenne) on methane emissions in vitro and from sheep
X.Z. Sun, S.O. Hoskin, S. Muetzel, G. Molano and H. Clark 391

Effects of feeding fresh white clover (Trifolium repens) or perennial ryegrass (Lolium perenne) on enteric methane emissions from sheep
A comparative analysis of on-farm greenhouse gas emissions from agricultural enterprises in southeastern Australia

Entire methane produced by finisher pigs is affected by dietary crude protein content of barley grain based, but not by corn based, diets

Effects of dietary crude protein and phytase-xylanase supplementation of wheat grain based diets on energy metabolism and enteric methane in growing finishing pigs

Methane production of growing and finishing pigs in southern China

Potential reduction of greenhouse gas emission from swine manure by using a low-protein diet supplemented with synthetic amino acids

Greenhouse gas emissions from swine manure stored at different stack heights

Low greenhouse gas emissions during composting of solid swine manure

Manure management: Implications for greenhouse gas emissions

Nitrogen transformations and greenhouse gas emissions during composting of manure from cattle fed diets containing corn dried distillers grains with solubles and condensed tannins

Low greenhouse gas emissions during composting of solid swine manure

Manure management: Implications for greenhouse gas emissions

Effects of mechanical separation on GHG and ammonia emissions from cattle slurry under winter conditions

Nitrous oxide emissions from Chernozemic soils amended with anaerobically digested beef cattle feedlot manure: A laboratory study

Ammonia and nitrous oxide interactions: Roles of manure organic matter management

Strategies to mitigate nitrous oxide emissions from land applied manure

Effect of antibiotics on methane arising from anaerobic digestion of pig manure

Repeated annual use of the nitrification inhibitor dicyandiamide (DCD) does not alter its effectiveness in reducing N₂O emissions from cow urine

Potential for carbon offsets from anaerobic digesters in livestock production

Effect of carbon on methane resulting from anaerobic digestion of pig manure

The role of animal feed ingredients in enteric methane production

Methane emissions from stored liquid dairy manure in a cold climate

Manure management: Implications for greenhouse gas emissions

Effects of dietary crude protein and phytase-xylanase supplementation of wheat grain based diets on energy metabolism and enteric methane in growing finishing pigs

A whole farm systems analysis of greenhouse gas emissions of 60 Tasmanian dairy farms

Mitigation of greenhouse gas emissions from beef production in western Canada – Evaluation using farm-based life cycle assessment

Role Modelling in Finding a Balance Between Greenhouse Gas Emissions and Food Production

Contents

Impacts of herbage mass and sward allowance of perennial ryegrass sampled throughout the growing season on in vitro rumen methane production

Enteric methane produced by finisher pigs is affected by dietary crude protein content of barley grain based, but not by corn based, diets

Effects of dietary crude protein and phytase-xylanase supplementation of wheat grain based diets on energy metabolism and enteric methane in growing finishing pigs

Methane production of growing and finishing pigs in southern China

Potential reduction of greenhouse gas emission from swine manure by using a low-protein diet supplemented with synthetic amino acids

Greenhouse gas emissions from swine manure stored at different stack heights

Effects of mechanical separation on GHG and ammonia emissions from cattle slurry under winter conditions

Low greenhouse gas emissions during composting of solid swine manure

Low greenhouse gas emissions during composting of solid swine manure

Manure management: Implications for greenhouse gas emissions

Effects of mechanical separation on GHG and ammonia emissions from cattle slurry under winter conditions

Nitrous oxide emissions from Chernozemic soils amended with anaerobically digested beef cattle feedlot manure: A laboratory study

Ammonia and nitrous oxide interactions: Roles of manure organic matter management

Strategies to mitigate nitrous oxide emissions from land applied manure

Effect of antibiotics on methane arising from anaerobic digestion of pig manure

Repeated annual use of the nitrification inhibitor dicyandiamide (DCD) does not alter its effectiveness in reducing N₂O emissions from cow urine

Potential for carbon offsets from anaerobic digesters in livestock production

Effect of carbon on methane resulting from anaerobic digestion of pig manure

The role of animal feed ingredients in enteric methane production

Methane emissions from stored liquid dairy manure in a cold climate

Manure management: Implications for greenhouse gas emissions

Effects of dietary crude protein and phytase-xylanase supplementation of wheat grain based diets on energy metabolism and enteric methane in growing finishing pigs

A whole farm systems analysis of greenhouse gas emissions of 60 Tasmanian dairy farms

Mitigation of greenhouse gas emissions from beef production in western Canada – Evaluation using farm-based life cycle assessment

Role Modelling in Finding a Balance Between Greenhouse Gas Emissions and Food Production

Relationships between methane production and milk fatty acid profiles in dairy cattle

Relationships between odd- and branched-chain fatty acid profiles in milk and calculated enteric methane proportion for lactating dairy cattle

Development of a national methane emission inventory for domestic livestock in Saudi Arabia

Regional inventory of methane and nitrous oxide emission from ruminant livestock in the Basque Country

A comparative analysis of on-farm greenhouse gas emissions from agricultural enterprises in south eastern Australia

A whole farm systems analysis of greenhouse gas emissions of 60 Tasmanian dairy farms

Mitigation of greenhouse gas emissions from beef production in western Canada – Evaluation using farm-based life cycle assessment
Predictions of enteric methane emissions for various summer pasture and winter feeding strategies for cow calf production
Farm survey used to guide estimates of nitrogen intake and ammonia emissions for beef cattle, including early season grazing and
piosisphere effects
S.C. Sheppard and S. Bittman ........................................................................................................................................... 688
Effects of genetic line and feeding system on methane emissions from dairy systems
M.J. Bell, E. Wall, G. Simm and G. Russell ......................................................................................................................... 699
Estimating greenhouse gas emissions from New Zealand dairy systems using a mechanistic whole farm model and inventory methodology
P.C. Beukes, P. Gregorini and A.J. Romera .......................................................................................................................... 708
Impacts of future climate scenarios on the balance between productivity and total greenhouse gas emissions from pasture based dairy
systems in south-eastern Australia
B.R. Cullen and R.J. Eckard .................................................................................................................................................... 721
Impacts of future climate scenarios on nitrous oxide emissions from pasture based dairy systems in south eastern Australia
R.J. Eckard and B.R. Cullen .................................................................................................................................................... 736
Potential effects of animal management and genetic improvement on enteric methane emissions, emissions intensity and productivity of
sheep enterprises at Cowra, Australia
D.J. Alcock and R.S. Hegarty .................................................................................................................................................. 749
Rumen stoichiometric models and their contribution and challenges in predicting enteric methane production
A.W. Alemu, J. Dijkstra, A. Bannink, J. France and E. Kebreab ........................................................................................... 761
Livestock and greenhouse gas missions: The importance of getting the numbers right
N. Hutchings, H. Montgomery, J.-F. Soussana, H. Steinfeld and T. McAllister ................................................................. 779
Towards a Balanced Future
What place for livestock on a re-greening earth?
H.H. Janzen ........................................................................................................................................................................... 783
